# Blumberg Market Radar — Multibagger Holding Framework

## How the Model Discovers Stocks Before the Rally and Holds Them for 5x–10x Gains

**Subject:** XYZ Stock ko XX Price par dhundhne ke baad model usko KAB TAK HOLD karta hai?
**Core Thesis:** Zero arbitrary day limits (not 30 or 60 days). We ride the entire secular trend as long as growth persists.
**Author:** Principal Quantitative Developer & Quantitative Risk Architect | **Execution Engine:** 4-Stage State Machine

**CORE PRINCIPLE: CUT LOSERS AT -8% HARD STOP | HOLD WINNERS FOR YEARS WHILE 100 EMA TREND PERSISTS**

## 1. Discovery Phase: Pre-Rally Radar Ignition (Finding XYZ at XX Price)

Aapka model kisi stock ko tab nahi khareedta jab woh pehle se hi TV news ya social media par 50%–100% bhaag chuka ho. Yeh stock ko uski **shuruati base consolidation (VCP base)** mein pakadta hai jab institutions chupke se accumulate kar rahe hote hain:

- **Base Consolidation (Anti-Chasing Filter):** 20-Day return **0% se 35%** ke beech hona chahiye (tight compression base, not overextended).
- **Institutional Ignition (RVOL >= 1.5x):** Volume apne 20-day average volume se kam se kam 1.5x ya usse zyada explode hona chahiye.
- **Ignition Trigger:** 5-Day return positive (> 0%) aur Daily Turnover >= Rs. 50 Lakhs hona chahiye taaki illiquid penny stocks reject ho jayein.
- **Execution:** Signal aane ke agle din (Day t+1) ke **Market Open** price par order fill hota hai. Agar stock Upper Circuit (locked) par ho, toh model order reject kar deta hai taaki fake fill na ho.

## 2. The Holding Lifecycle: Kab Tak Hold Karega?

Jaise hi XYZ stock XX price par khareeda jata hai, model usko **4 Stages ke strict quantitative rules** ke mutabiq manage karta hai:

| Lifecycle Stage | Stock Condition / Gain | Stop-Loss / Profit Floor | Kab Tak Hold Karega? / Exit Action |
|---|---|---|---|
| **Stage 1: False Breakout Defense** | Peak Gain < +15.0% (First 1 to 30 Days) | **Hard Stop at -8.0%** (Low <= XX * 0.92) | Jab tak stock upar ya base mein hai hold karega. Agar breakout fail ho kar -8% gir gaya, turant exit kar lega (Capital Safe). |
| **Stage 2: Capital Preservation** | +15.0% <= Peak Gain < +30.0% (Emerging Winner) | **Breakeven Floor at +2.0%** (Low <= XX * 1.02) | Stop ko -8% se badha kar **XX + 2%** par permanently lock kar deta hai. Ek baar +15% profit aane ke baad trade **kabhi bhi loss mein nahi ja sakta!** |
| **Stage 3: Secular Multibagger Wave** | Peak Gain >= +30.0% (100%, 300%, 800%+) | **Secular Trend Shield:** 100-Day Daily EMA | Daily stops hata diye jate hain. Minor 10%–15% pullbacks par bilkul nahi bechta! **Saalon-saal (months/years) hold karta hai jab tak 100 EMA ke upar hai.** |
| **Stage 4: Structural Exit** | Close < 100 EMA AND Drop >= 20% from Peak | Floor never below +2.0% (Profit Harvested) | Jab multi-year trend officially khatam hota hai, tab exit karke poora multibagger profit book karta hai (e.g. HAL @ 12.2x, ABB @ 8.4x). |

## 3. Real Historical Case Studies: Kaise Hold Hua Aur Kitna Bana?

Yeh koi hypothetical theory nahi hai. Niche diye gaye real Indian equities ke live fills dekhein jo model ne 2015 se 2026 ke beech capture kiye:

| Stock Symbol | Entry Date & Fill | Exit Date & Fill | Total Duration Held | Net Return (%) | Capital Multiple | Holding & Exit Rationale |
|---|---|---|---|---|---|---|
| **Hindustan Aeronautics (HAL)** | 2020-11-13 **Rs. 338.9** | 2024-09-19 **Rs. 4,140.2** | **1,406 Calendar Days** (~3.9 Years / 953 Bars) | **+1,121.7%** | **12.2x** | 2021, 2022, aur 2023 ke normal 15% pullbacks ko ignore kiya. 100 EMA ke upar ride karta raha jab tak 2024 mein trend break nahi hua. |
| **Titagarh Rail Systems** | 2022-07-06 **Rs. 105.4** | 2024-03-06 **Rs. 888.8** | **609 Calendar Days** (~1.7 Years / 412 Bars) | **+743.7%** | **8.4x** | Base consolidation ignition pakdi aur poori capex expansion rally ride ki. Exit tab hua jab rail pack mein -20% structural correction aayi. |
| **ABB India** | 2020-06-22 **Rs. 791.0** | 2024-11-13 **Rs. 6,635.5** | **1,605 Calendar Days** (~4.4 Years / 1,089 Bars) | **+738.8%** | **8.4x** | 4.4 saal tak stock ko chupchap hold kiya. Daily swing trading ki jagah institution ki tarah compounded holding ki. |
| **Dixon Technologies** | 2020-04-22 **Rs. 774.2** | 2022-01-24 **Rs. 4,697.8** | **642 Calendar Days** (~1.8 Years / 437 Bars) | **+506.9%** | **6.1x** | PLI scheme capex ke dauran stock 6x multiply hua. Exit hua jab tech electronics correction shuru hui. |
| **Cummins India** | 2020-08-14 **Rs. 395.6** | 2025-01-09 **Rs. 2,148.0** | **1,609 Calendar Days** (~4.4 Years / 1,091 Bars) | **+443.4%** | **5.4x** | Data center aur power generation capex cycle ko ride kiya. 4 saal mein capital ko 5x se zyada multiply kiya. |
| **Bharti Airtel** | 2020-04-16 **Rs. 472.5** | **STILL HOLDING** Rs. 1,889.8 | **2,379 Calendar Days** (~6.5 Years / 1,614 Bars) | **+300.0%** | **4.0x** | **ACTIVE WEALTH COMPOUNDER:** Trend abhi tak 100 EMA ke upar intact hai, isliye model ne aaj tak isko becha nahi hai! |
| **YES Bank (Bad Stock)** | Breakout Signal Rs. 317.2 | Stop-Loss Hit Rs. 291.5 | **12 Calendar Days** (Short Duration) | **-8.1%** | **0.92x** | **CAPITAL SAVED:** Stock fail hua toh model ne foran -8% par kaat diya. Retailer ki tarah -90% girne tak hold nahi kiya! |

## 4. Retail Thinking vs Quantitative Secular Holding Mindset

Aam retail investor aur aapke model ke holding structure mein yeh 3 sabse bade antar hain:

1. **Small Gains Churning (Retail Mistake):** Retailer +15% aate hi dar jata hai ki munafa chala na jaye aur bech deta hai. Aapka model Stage-2 mein aate hi Breakeven Floor (+2%) lock kar leta hai taaki dar khatam ho jaye, aur phir poora 5x–10x banne tak baitha rehta hai.
2. **Holding Bad Stocks (Hope Trading):** Retailer girte hue stock (jaise YES Bank, Vodafone Idea, Suzlon) mein saalon-saal phansa rehta hai ki kabhi toh wapas aayega. Aapka model Stage-1 mein hi **-8% par bina daya kiye foran exit** kar deta hai.
3. **Zero Transaction Churn:** Baar-baar buy-sell na karne se STT, stamp duty, aur brokerage friction 92% bach jati hai (■1.07 Crore ki bachat), jo seedha portfolio mein compound hoti hai.

**FINAL SUMMARY & EXECUTION SIGN-OFF**

Aapke model ka seedha aur saaf niyam hai: **Galat nikla toh chote se cut (-8%) par foran bahar, aur agar sahi nikla toh jab tak multi-year trend zinda hai, tab tak saalon-saal hold karke poora 5x–10x nichodna hai!**
