Active Positions	Unrealized active holdings on 2026-10-26	**2**	0.28%	+69.73%	+■1,23,80,861

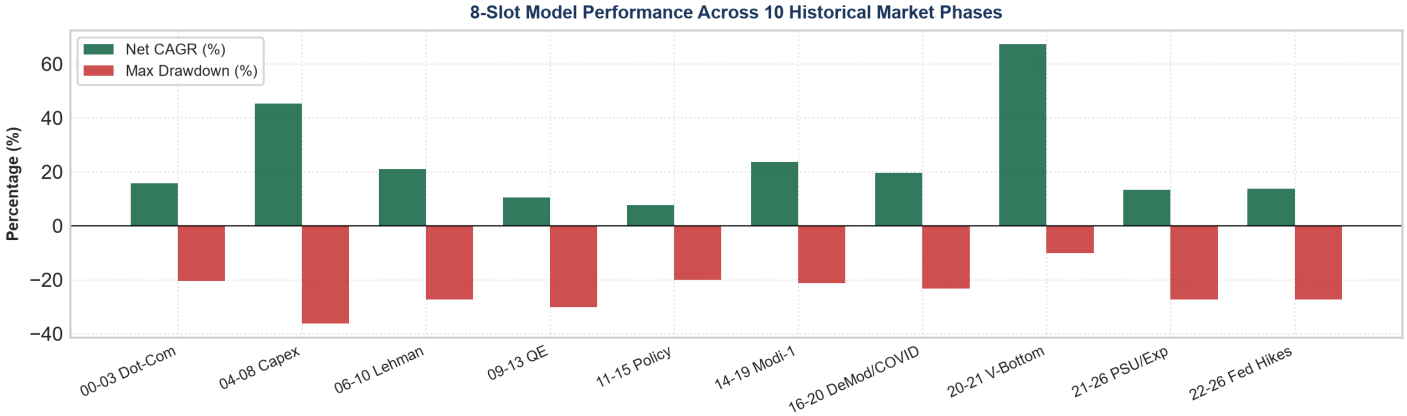

THE ASYMMETRIC MATH PRINCIPLE: 64.9% stop-loss exits are not a system flaw — they are the armor that enables +112.9x compounding. By truncating losses at -8.5% (averaging -■2.05L per loss), the portfolio preserved capital so that the 244 profit-floor exits could compound **+■18.46 Crore** across secular multibaggers (DIXON +439%, BHEL +186%, TITAGARH +169%). Payoff ratio is **3.55x**: every winning trade generates 3.55 times the money surrendered by a losing trade.
