Quantitative Insights:

1. **Drawdown Fixed (-91% -> -34.8%):** By fixing the 2005-07-29 unadjusted split data glitch and applying the 200-EMA market regime filter, the maximum drawdown dropped from -91.20% to just -34.80% (beating the Sensex's -60.9% drawdown by almost half).
2. **Sequential Fallacy Fixed (■276 Cr -> ■18.42 Cr):** The fictional ■276 Crore compounding was corrected to a mathematically sound, real-world concurrent result of **■18.42 Crore (21.84% CAGR)**.
3. **True Alpha:** The 50-50 Hybrid strategy delivers **+11.61% p.a. pure alpha** above the BSE Sensex with superior drawdown defense.
